Previous policy details (ie. Disclosure of NCB, previous claim details)	
15	Criteria for arriving at IDV & Illustration	The idv calculation is done on below criteria Insured Declared Value (IDV) = (Company's exshowroom price - the depreciation value) + (Cost of car accessories - the depreciation value of these parts) Let us understand how the depreciation rates are used to calculate your car's IDV with the help of the following example. Suppose, you're buying a car for ₹1000000. The moment you drive it out of the showroom, its IDV starts decreasing. The depreciation rate for the first six months is 5%. That means the IDV of your car for the first six months is ₹950000. Similarly, the IDV of your car after six months of buying will be ₹850000, and it'll remain the same till twelve months or one year from the purchasing date. And if your car's age is between four and five years, its IDV will be half of its price.	
16	Criteria for considering vehicle as Total loss/Constructive Total loss	In the event of an accident leading to total loss or constructive total loss settlement of claim will be based on what is mentioned in the policy schedule and / or agreed by policyholder either 75% or 60% based on geography and model.
